

Group 1 – Sprint 3 Planning Report

(Victoria Vavulina, Monami Kirjavainen, Miro Valtonen, Riku Toivanen)

Sprint 3 Goals

Complete all UI and Firestore integration for event creation and participant input.

Planned Tasks

1. Implement Remaining HostSide Event Creation UI
 - Build UI for selecting the date range
 - Build UI for selecting time slots
 - Build UI for choosing the meeting area
2. Build All Participant Input UI (Implement every screen where participants provide their availability and preferences.)
3. Connect Participant Inputs to Firestore
4. Integrate UI ↔ ViewModel ↔ Firestore Flow
 - Ensure all new UI screens update the shared ViewModel
 - Ensure the ViewModel writes participant data correctly to Firestore

☐	MA Sprint 3	1 Apr – 8 Apr (16 work items)
☒	MA-48	Integrate a time range-picker library into the 'Select Date Range' button.
☒	MA-49	Create host time slots selecting page
☒	MA-50	Create time slot editing modal ui
☒	MA-51	Integrate a time-picker library into the Start Time and End Time buttons
☒	MA-52	Create Host area selecting page
☒	MA-63	Add the getEvent function to the event repository to fetch the host-created event for the participant-input UI
☒	MA-60	Create the participant's availability and preference input ViewModel and implement functionality to fetch the host-defined event data from Firestore, as this information is required...
☒	MA-53	Create Participant's meetup detail page
☒	MA-54	Create Participant's availability selecting page
☒	MA-55	Create Participant's small area selecting page
☒	MA-56	Create Participant's place type and keyword page
☒	MA-57	Create Participant's submission complete page
☒	MA-58	Create a data model for participant input. This model will be used to insert participants' availability and preference data into Firestore
☒	MA-59	Create a repository to insert participant input into Firestore
☒	MA-61	Add functionality to the same participant's availability and preference input ViewModel to connect the UI and the repository, and to manage the entire participant-input process
☒	MA-62	Connect the participant-input pages to the same single participant's availability and preference input ViewModel so that all participant input flows correctly through the ViewMode...

Sprint Success Measurement

User can open the participant input flow

Participant can enter all required availability and preference information

Participant submission is saved successfully to Firestore

Firestore stores availability, preferred area, place type, and keyword correctly

Submission complete screen is shown after successful save
